

## Overview

We understand that our clients are at different stages of project development, so we offer a range of services to support researchers doing everything from basic research to launching a commercial product. If you are unsure what grade of materials (plasmid and/or virus) will work best for your applications, please refer to the information below.

## Have you selected your candidate?

**No.** A candidate transgene still needs to be identified and tested for *in vivo* efficacy.

→ Vigene makes research-grade materials for your initial screening and testing

**Yes.** All of the necessary screens and assays have been performed and a candidate transgene has been identified.

→ Continue to preclinical research using research-grade materials

## Have you completed preclinical research?

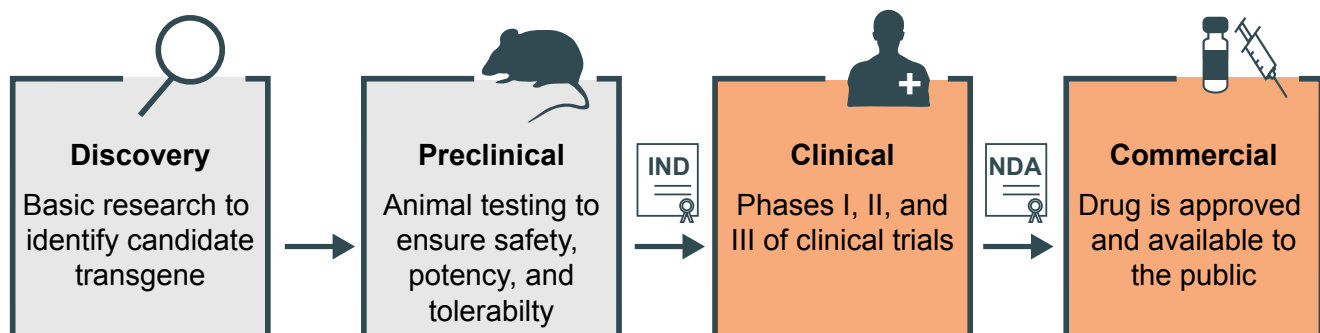

**No.** Preclinical testing has not yet been completed.

→ Vigene makes research-grade materials that can be used to determine the safety of the transgene before moving forward

**Yes.** Preclinical research is complete and the dose/patient and total amount of GMP material required has been calculated.

→ Vigene manufactures GMP materials for clinical trials and commercialization
